

Laboratory solutions for food analysis

Innovative, Efficient and Safe

BUCHI provides sample preparation and analysis solutions for the food and beverage industry, laboratories, research institutions, and regulatory authorities. Our systems support quality control and compositional analysis of raw materials and finished products, including the determination of moisture, fat, protein, ash, and other key parameters to ensure product quality, compliance, and food safety.

SyncorePlus

The SyncorePlus offers a solution for concentrating multiple samples without the need of a nitrogen cylinder.

- Concentration to specific volume or evaporation to dryness.
- Automated processes.
- Rack options from 4 to 96 positions.
- Fast and flexible performance.
- Enhanced operator safety. No emissions into the environment thanks to the condenser, which enables recovery of vapors generated during evaporation.

SpeedExtractor E-914/E-916

SpeedExtractor E-914/E-916 is the best solution for pressurized solvent extraction (PSE), combining speed with maximum productivity.

- High throughput with up to 6 samples processed in parallel.
- Up to 96 samples per shift.
- Easy, safe, automated operation.
- Maximum flexibility of process parameters.
- Wide range of applications.
- Lower cost per analysis than similar instruments.
